REASONS FOR ALLOWANCE

1. The following is an examiner's statement of reasons for allowance: Claims 27-30 are considered allowable since when reading the claims in light of the specification, none of the references of record alone or in combination disclose or suggest the combination of limitations specified in the independent claims. The prior art of record (US Patent # 5,541,552) relates to method and apparatus for demodulating a signal conveyed by multiple carrier comprises a FFT circuit performing a calculation of fast Fourier transform to obtain phase information, which was demodulated from a plurality of carriers and superimposed upon the carriers whereby correlation detector signal from the correlation detector 112 supplied to an interval integrator 113 integrates the correlation detected signal. As to claims 27-30, the prior art of record does not teach integrating results of correlation found from the predetermined intervals of the signal by adding the result when the result is found from a non-inverted interval and by subtracting the result when the result is found from an inverted interval; and determining the additional information superimposed on the signal on a result of the integrating.

As to claims 31-34, the prior art of record does not teach an integrator for integrating results of correlation found from the predetermined intervals of the signal by adding the result when the result is found from a non-inverted interval and by subtracting the result when the result is found from an inverted interval; and means for

determining the additional information superimposed on the signal based on a result of the integrating. Any comments considered necessary by applicant must be submitted no later than the payment of the issue fee and, to avoid processing delays, should preferably accompany the issue fee. Such submissions should be clearly labeled "Comments on Statement of Reasons for Allowance."
